

DSRAZOR

for Windows

DSRAZOR for Windows is a new administration tool that gives you an easy-to-use interactive agent that helps you manage your Windows and Active Directory environments. Based upon our widely used DSRAZOR for NetWare product first released in 1999, **DSRAZOR for Windows** is ready to provide you with its unique management abilities.

DSRAZOR gives you the ability to quickly create customized *script-free* applications that you can use to displace or complement your existing scripting solutions.

DSRAZOR's patented customization interface gives you the power to create the exact query you need, *without scripting!* Need to query for all users that have never logged in? How about groups with no members? Or maybe you need to know which Active Directory objects have been assigned Exchange's "Send As" permission? You will find ready-to-run applets for each of these queries and many more in **DSRAZOR's** Console.

DSRAZOR's Console presents you with a variety of ready-to-run solutions ranging from Active Directory and Windows File System Security Assessment to importing users. Here is a partial list of the useful applets you will find:

- Accounts that are Locked
- Accounts with no logon for the past 30, 60, 90 days
- Accounts where last logon failed
- Accounts with Dial-in Permission
- Smart delete of selected accounts including Home Directory
- Accounts with "Allowed to Authenticate" permission
- Active Directory ACLs with invalid SIDs
- File System ACLs with invalid SIDs
- Document Users, Groups, Group Membership and more
- Report on Active Directory Object Ownership
- User creation time report
- Modify "Profile Path" for selected Active Directory users
- Modify "Home Directory" plus create for selected Active Directory users
- Import users and selected attributes
- View Home Directory Sizes and Contents
- Document File Ownership
- Query Domain Controllers where control panel service is not running
- View Open Files — force close
- View and report Active Directory attributes
- And many more

✓ Document ✓ Query
 ✓ Interact ✓ Manage
